Introduction

This document pertains to all CareCloud Connect adhering to HL7 messaging, version 2.3 through 2.5.1. It defines the Connectivity, File Format, Inbound and Outbound message types. The interfaces addressed in this document are specific to CareCloud for the exchange of electronic data between health care information systems.

Connectivity & Communication Components

The following methods of connectivity are supported for both inbound and outbound messaging and all require a secure end-to-end communication, and *available* only and only if the communication is established *directly* between CareCloud and the Vendor.

- **File Transfer**
 - ✓ IPSec point-to-point VPN tunnel is commonly used.
- **Secure-FTP (SFTP)**: Preferred method of connectivity for a cloud-based PMS.
 - ✓ Secure FTP server required.
 - ✓ Server located at the practice:
 - Practice to provide connection information and credentials to CareCloud.
 - The practice is responsible for the setup and maintenance of said connection.
 - ✓ Server located at CareCloud:
 - CareCloud to provide the corresponding connection information and credentials.
 - CareCloud is not prone for the required Secure-FTP Client for this solution to work.

Messages Supported & Types

The interface engines are designed to handle:

- **Inbound**
 - HL7 ADT Demographics A04, A08
 - HL7 DFT Charges P03
- **Outbound**
 - HL7 ADT Demographics A04, A08
 - HL7 SIU Appointments S12, S14, S15

Patient Administration

Purpose

The Patient Administration transaction set provides for the transmission of new or updated demographic and visit information about patients. Since virtually any system attached to the network requires information about patients, the Patient Administration transaction set is one of the most commonly used.

Generally, information is entered into a Patient Administration system and passed to the nursing, ancillary and financial systems either in the form of an unsolicited update or a response to a record-oriented query.

This chapter defines the transactions that occur at the seventh level, that is, the abstract messages. The examples included in this chapter were constructed using the HL7 Encoding Rules.

Trigger Events

Message Type	Trigger Event	Traffic		Description
		Inbound	Outbound	
ADT	A28	Yes	No	Register minimal Patient Information
	A04	Yes	Yes	Patient Registration including insurance details
	A08	Yes	Yes	Update Patient Information
	A31	No	No	Minimal patient update

HL7 ADT Segment Overview

Segment	Instance/ Set ID	Description
MSH	1	Message Header
EVN	1	Event Type
PID	1	Patient Demographic
NK1	1	Next of Kin
PV1	1	Patient Visit Detail
GT1	1	Responsible Party Demographic
IN1	1	Primary Insurance Information
IN2	2	Secondary Insurance Information
IN1	1	Additional Insurance Information
IN2	2	Secondary Additional Insurance Information

HL7 ADT Message Notes

- The Provider ID that is provided on PV1.7.1 by default is the assigned CareCloud ID that is assigned to the provider in the CareCloud System. This ID is unique to the Provider within the CareCloud System. This ID can be replaced for the Providers NPI number.
- The Referring Physician ID that is provided on PV1.8.1 by default is the NPI that is assigned to the provider.
- PID.2.1 contains the CareCloud Patient Chart Number. This field is an optional field that can be manually entered by the practice, entered by an auto chart numbering process or not entered at all. It is used as consistent reference to the patient.
- PID.3.1 contains the Patient ID that is a unique patient identifier for a patient within the CareCloud system. This Identifier should be used to as the shared patient id amongst interfacing system.

ADT Segment Detail

HL7 ADT messages carry patient demographic information for HL7 communications but also provide important information about **trigger events** (such as patient admit, discharge, transfer, registration, etc.). Some of the most important segments in the ADT message are the PID (Patient Identification) segment, the PV1 (Patient Visit) segment, and occasionally the IN1 (Insurance) segment. ADT messages are extremely common in HL7 processing and are among the most widely used of all message types.

HL7 ADT MSH

defines the intent, source, destination, and some specifics of the syntax of a message.

Pos	Segment Name	Required	Data Type	Pos	Fields	Sample
MSH.1	Field Separator	Yes	ST	MSH.1.1		
MSH.2	Encoding Characters	Yes	ST	MSH.2.1		^~\&
MSH.3	Sending Application	No	HD	MSH.3.1	Namespace ID	CC
				MSH.3.2	Universal ID	CareCloud
MSH.4	Sending Facility	No	HD	MSH.4.1	Namespace ID	17
				MSH.4.2	Universal ID	Practice Name
MSH.5	Receiving Application	No	HD	MSH.5.1	Namespace ID	VN
				MSH.5.2	Universal ID	Vendor_Name
MSH.6	Receiving Facility	No	HD	MSH.6.1	Namespace ID	17
				MSH.6.2	Universal ID	Practice Name
MSH.7	Date/Time of Message	Yes	DTM	MSH.7.1		20110511140526

```

HL7 ADT EVN

The EVN segment is used to communicate necessary trigger event information to receiving applications.

Pos	Segment Name	Required	Data Type	Pos	Fields	Sample
EVN.1	Event Type Code	No	ID	EVN.1.1		A08
EVN.2	Recorded Date/Time	Yes	DTM	EVN.2.1		20110518040526

EVN|A08|20110518040526

HL7 ADT PID

The PID segment is used by all applications as the primary means of communicating patient identification information. This segment contains permanent patient identifying and demographic information that, for the most part, is not likely to change frequently.

Pos	Segment Name	Required	Data Type	Pos	Fields	Sample
PID.1	Set ID - PID	No	SI	PID.1.1		1
PID.2	Patient ID	No	CX	PID.2.1	ID Number	389312334
PID.3	Legacy Patient ID	No	CX	PID.3.1	ID Number	0010-2-6360453028

Master Files

Purpose

In an open-architecture healthcare environment there often exists a set of common reference files used by one or more application systems. Such files are called master files. Some common examples of master files in the healthcare environment include:

- a. staff and health practitioner master file
- b. system user (and password) master file
- c. location (census and clinic) master file
- d. device type and location (e.g., workstations, terminals, printers, etc.)
- e. lab test definition file
- f. exam code (radiology) definition file
- g. charge master file
- h. patient status master
- i. patient type master
- j. service item master file

Trigger Event

Traffic				
Message Type	Trigger Event	Inbound	Outbound	Description
MFN	M02	Yes	Yes	Master File - Physician Information

HL7 MFN Segment Overview

Segment	Instance/ Set ID	Description
MSH	1	Message Header
EVN	1	Event Type
MFI	1	Master File Identifier
MFE	1	Master File Entry
STF	1	Personnel referenced by information systems
PRA	1	Detailed Medical Practitioner information

Master Files Notification Message

A given master files message concerns only a single master file. However, the provision of a record-level event code (and requested activation date) on the MFE and the MFA segments allows a single message to contain several types of changes (events) to that file.

MFE.4	Referring Doctor	YES	XCN	MFE.4.1	ID Number	45377

MFE | | | | 1767821233

HL7 MFN STF

Identify any personnel referenced by information systems: providers, staff, system users, and referring agents. In a network environment, this segment can be used to define personnel to other applications such as order entry clerks, insurance verification clerks, admission clerks, as well as provider demographics.

Pos	Segment Name	Required	Data Type	Pos	Fields	Sample
STF.1	Referring Physician	Yes	CX	STF.1.1	Identifier	150355

Scheduling

Purpose

A schedule controls the dates and times available for the performance of a service and/or the use of a resource. One schedule applies to one service or resource, since each service or resource can be reserved independently of the others.

A schedule consists of slots of time during which the controlled service or resource is potentially available for performance or use. Slots are categorized as open, booked, or blocked.

Appointments are instances of the performance of a service or the use of a resource. Appointments can describe scheduled activities related to patients in a healthcare setting, or they can describe scheduled activities wholly unrelated to patients.

Trigger Events

		Traffic		Description
Message Type	Trigger Event	Inbound	Outbound	
SIU	S12	Yes	Yes	New Appointment
	S14	Yes	Yes	Update Appointment Schedule
	S15	Yes	Yes	Appointment Cancellation

HL7 SIU Segment Overview

Segment	Instance / Set ID	Description
MSH	1	Message Header
SCH	1	Scheduling Header Information
PID	1	Patient Demographic
PV1	1	Patient Visit Detail
RGS	1	Resource Group
AIL	1	Appointment Information - Location Resource
AIP	1	Appointment Information - Personnel Resource

Reasons

This chapter defines two kinds of reasons used with transactions. The first is an appointment reason that indicates why the appointment is being booked - and ultimately why the activity is going to occur. The second is an event reason that describes why a particular trigger event has been generated. Reasons tend to be static, whereas statuses tend to change. In contrast, trigger events describe an action to be performed.

Appointment reasons tend to be relatively static for the life of the scheduled activity. Typical examples of appointment reasons include the following: routine, walk-in, check-up, follow-up, emergency, etc.

HL7 SIU Message Notes

- The Provider ID that is provided on PV1.7.1 by default is the assigned CareCloud ID that is assigned to the provider in the CareCloud System. This ID is unique to the Provider within the CareCloud System. This ID can be replaced for the Providers NPI number.
- The Referring Physician ID that is provided on PV1.8.1 by default is the NPI that is assigned to the provider.
- The Schedule ID in the SCH.1.1 and the Placer Appointment ID in the SCH.5.1 segment both reflect the CareCloud Appointment ID. Although this identifier is unique to each appointment in CareCloud system, it does not follow the appointment when updated.

Patient Accounting

Purpose

The Finance describes patient accounting transactions. Financial transactions can be sent between applications.

The patient accounting message set provides for the entry and manipulation of information on billing accounts, charges, payments, adjustments, insurance, and other related patient billing and accounts receivable information.

Trigger Event

Traffic				Description
Message Type	Trigger Event	Inbound	Outbound	
DFT	P03	Yes	No	Process detail financial Transaction

The triggering events that follow are served by Detail Financial Transaction (DFT).

-----	---	-----------------------

Patient Accounting Message Set

The patient accounting message set provides for the entry and manipulation of information on billing accounts, charges, payments, adjustments, insurance, and other related patient billing and accounts receivable information.

This Standard includes all of the data defined in the National Uniform Billing Field Specifications.

We recognize that a wide variety of billing and accounts receivable systems exist today. Therefore, in an effort to accommodate the needs of the most comprehensive systems, we have defined CareCloud's extensive set of transaction segments.

HL7 DFT Message Notes

- Up to 8 Financial Transactions Lines can be processed by the CareCloud Connect Processor.
- Up to 8 Diagnosis Codes can be processed by the CareCloud Connect Processor.
- Up to 4 Modifiers can be processed by the CareCloud Connect Processor.
